

Safety Sign Information

COMPLIANCE

OSHA 1910.145 and ANSI Z535 require that safety signs be used to identify and define specific hazards that, without identification, could lead to property damage or accidental injury of workers and/or the public.

MATERIAL TYPES

FG-Fiberglass:

Longest lasting material. Ideal for outdoors or harsh environments.

AL-Aluminium:

Abrasion and chemical resistant. For indoor and outdoor use.

PL-Plastic:

For temporary or light use. 1 to 2 year outdoor life.

SS-Self-Sticking Polyester:

For basic use.

Glow in the Dark (Photoluminescent):

Illuminating material absorbs light and is immediately visible in the event of a power outage.

DANGER

Red

Indicates an immediate hazard capable of producing irreversible damage or injury.

CAUTION

Yellow

Indicates potential hazards that may result in severe but not irreversible damage or injury.

NOTICE

Blue

Provides general information to avoid confusion or misunderstanding.

SAFETY FIRST

Green or other green legends

Indicate general rules related to health, first aid, medical equipment, sanitation, housekeeping, and safety.
