

## Threaded Rod and Threaded Stud Information

### THREADED RODS

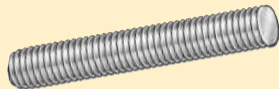

Headless, fully threaded metal bars are available in stock lengths of 2 ft. to 12 ft. Cut to length with a hacksaw or power band saw.

### THREADED STUDS

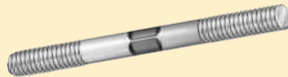

Headless metal rods are precut to standard lengths as short as 1/4". Can be threaded on one or both ends, or along entire length.

**Fully Threaded Studs**—Threaded the entire length with conventional threads. Commonly used with a nut on either end to clamp two parts together.

**Double-End Studs**—General term for studs with an unthreaded portion in the middle and threads on both ends. Also known as stud bolts.
